**location**

Kelowna

**size**

8,455 m<sup>2</sup>

**value**

\$30 million

**status**

complete 2019

**key features**

Adaptable

Mixed-use facility

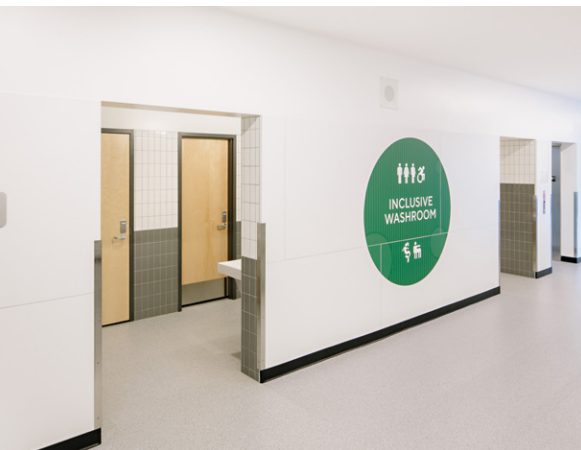

Fostering connection to adjacent facilities

Maximizing physical site attributes for optimal design

## embracing progressive design and learning elements

collaboration with stakeholder groups to create advanced learning practices & effective multipurpose use.

Designed for 21st Century Learning, Canyon Falls Middle School hosts a series of interdisciplinary learning pods where groups of classrooms open into a large collaborative maker space for the students to share their ideas with each other and work together to generate new ones. Classrooms on the first level open onto the outdoor learning spaces to connect students with nature and to collaborate outdoors. Spaces are multi-functional to maximize their potential, including a stage in the atrium to transform a circulatory and casual space to a learning place for plays and presentations. Similar informal and multi-functional learning spaces are distributed throughout the school to enhance the learning community.
