## client

School District No. 28 Quesnel

## location

Quesnel

## size

3,250m<sup>2</sup>

## value

\$40 million

## status

Building Permit; est. complete

September 2025

## key features

21st-century learning elements

Neighbourhood Learning Centre

50% GHG reduction

**resilient  
replacement school**  
new school offers more for  
students and the community

Located on the banks of the Quesnel River, this replacement school combines the theme of the flowing river with 21st-century learning features such as an open concept learning commons and learning pods. Resilience is also an important aspect of the project. A landslide in 2021 resulted in the existing school being deemed unsafe. A pile foundation will protect the new building from soil instability.

The one-storey, 390-capacity K-7 school building includes a Neighbourhood Learning Centre with childcare and a larger gym for community use. The school site is almost flat with a slope at the property boundary where the natural landscape will be preserved. Sustainable features of the school include a 50% GHG reduction and planning for the potential use of solar panels.
